### **DETAILED ACTION**

1. This office acknowledges receipt of the following item from the Applicant:  
Information Disclosure Statement (IDS) filed on 11/24/03 and it was consider.  
Papers submitted under 35 U.S.C. 119(a)-(d) have been placed of record in the file.
2. Claims 1-22 are presented for examination.

### **REASONS FOR ALLOWANCE**

3. The following is an examiner's statement of reasons for allowance:  
Claims 1-22 are considered allowable since the prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations. The prior art does not teach the claimed invention having a method and data holding device among other features including: a data holding circuit with first and second inverter circuits; a nonvolatile memory element which records a state corresponding to data existing in the data holding circuit, with one end of the nonvolatile memory element connected to an input node of the first inverter circuit at the time of writing data, and which discharges an electric charge which corresponds to the nonvolatile state recorded in the nonvolatile memory element and which can generate a voltage higher or lower than the threshold voltage of the first inverter circuit at the input node of the first inverter circuit and reading signal is applied to the other end of the nonvolatile memory element at the time of restoring data; the data holding circuit having a loop switching gate which is interposed between a nonvolatile memory element

Art Unit: 2818

connecting node defined as a connecting node between the input node of the first inverter circuit and the one end of the nonvolatile memory element. Prior art also does not disclose data holding circuit, and a variable resistance element interposed between a memory node of the data holding circuit and a reference potential; a nonvolatile memory element for controlling the resistance value of the variable resistance element, wherein a state corresponding to data stored in the data holding circuit is recorded in the nonvolatile memory element, and data corresponding to a state recorded are restored in the data holding circuit.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tai (5592411), Miyamoto et al (6493267) and Komatsuzaki (6707702) disclose nonvolatile memory device and methods having flip-flop or inverters circuit for storing or holding data in the semiconductor device.
